

ENGINEERING DESIGN CRITERIA MANUAL

PART 5

LANDSCAPING SYSTEMS

DRAFT

PART 5. LANDSCAPING SYSTEMS

Section A - General.

1. Part 5 of this Engineering Design Criteria Manual shall apply to downtown streets and City-wide thoroughfares as noted below.
2. The City Manager, or his designee, may issue written technical deviations from this Part 5. Such deviations must be based upon review of a detailed study, prepared by a Registered Landscape Architect for the applicant, which demonstrates that the performance of designs proposed for deviation will perform at the same or higher level than those specified in this manual and will result in greater walkability.
3. Existing rights-of-way within, or the half of the existing right-of-ways adjacent to, the site development, without regard for whether or not such streets provide access to the development, shall be improved by constructing landscaping, hardscape, and irrigation elements.
4. The “*Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Street and Highways*” (“*Greenbook*”) 2018 or later edition and the “*Florida Design Manual*” (“*FDM*”) 2020 or later edition, both prepared by the Florida Department of Transportation, Tallahassee, Florida, shall be used as a guide in the design of all public streets.
5. For streets designed to maintain lower speeds or for the express purpose of enhancing pedestrian comfort and increasing walkability, “*Designing Walkable Urban Thoroughfares: A Context Sensitive Approach*” 2010 or later edition prepared by the Institute of Transportation Engineers shall guide the design. In case of conflict, the criteria established in the Engineering Design Criteria Manual shall supersede.

Section B - Submittal Requirements.

1. General:

The design for landscaping shall conform to standard accepted best maintenance practices. Common references include the latest edition of the following texts:

- a. Public Works Management Practices Manual; American Public Works Association.
- b. Low Impact Design Manual; Sarasota County.
- c. Up by Roots: Healthy Soil and Trees in the Built Environment. James Urban. International Society of Arboriculture.
- d. Trees in Urban Design. Henry F. Arnold.
- e. Florida Yards & Neighborhoods Handbook. University of Florida Institute of Food and Agriculture Sciences.

Copies of the above publications are on file at the office of the City Engineer or are available online. Requirements set forth in this Engineering Design Criteria Manual shall prevail over those set forth in the above or any other publications.

2. Landscaping Plan:

The proposed landscaping plan must include the following elements:

- a. An overlay of existing utilities in the public right-of-way.

- b. An overlay of proposed utilities for the development.
- c. A legend identifying proposed plants on each page as well as a North arrow.
- d. Drawing shall be to scale on the printed page at 1"=20'.
- e. The width of the Pedestrian Clear Zone (PCZ).
- f. Trees depicted with the trunks shown as columns and the proposed canopy shown as a circle, depicting the average crown diameter at planting as well as the overlap of mature canopies.
- g. Effective soil area per tree, depicted graphically and by label.
- h. Root ball dimension, shown to scale

3. Hardscape Plan:

The proposed hardscape plan must include the following elements:

- a. A legend identifying proposed surface treatments on each page.
- b. Drawing shall be to scale on the printed page at 1"=20'.
- c. The width of the Pedestrian Clear Zone (PCZ).

4. Irrigation Plan:

The proposed hardscape plan must include the following elements:

- a. An overlay of existing utilities in the public right-of-way
- b. A legend identifying proposed irrigation components on each page
- c. Drawing shall be to scale on the printed page at 1"=20'.
- d. The width of the Pedestrian Clear Zone (PCZ).

5. Maintenance Agreements:

All landscaping installations in the right-of-way apart from sod require an encroachment agreement affirming the landowner responsible for maintaining the landscape, hardscape, and irrigation if the site plan is under review per City Code 29.5-4 (a),(b), or (c). Encroachment agreements must include the following elements:

- a. The landscaping plan
- b. The hardscape plan, when applicable
- c. The irrigation plan, when applicable

Section C - Intersection Sight Distance Triangles.

1. For the purposes of determining intersection sight distance triangles, trees without significant foliage below 8-feet at maturity shall be treated as the equivalent of utility poles for roads with posted speeds of 30 mph or less.
2. For roads with posted speeds of 25 mph or less, sight distance triangles shall be taken at driveways 8 feet from the edge of the road, with a visibility distance of 50-feet. At intersections, sight visibility shall be for 75 feet.
3. At signalized intersections, the first vehicle stopped on one approach should be visible to the driver of the first vehicle stopped at each of the other approaches. Left-turning vehicles should have sufficient sight distance to select gaps in oncoming traffic and complete left turns. Apart from these sight conditions, there are generally no other approach or departure sight triangles needed for signalized intersections, except if a light is to be placed on two-way flashing operation under off-peak or nighttime conditions.

Section D - Soil for Planting Trees.

1. Soil Volume: The planting area shall have uncompacted coarse loam or equal. Street trees shall be provided adequate soil for growth according to the following parameters:

Table 5-1: *Prepared Soil Standards*

| A | B | C | D | E |
|--|-----------------------------|---------------------------------------|--|---------------------------------|
| Total Planting Area (Lawn, island, or soil strip) | Total Available Soil Volume | Distance Between Sidewalk and Curbing | Minimum Distance of Tree from Pavement or Wall | Maximum Tree Size at Maturity |
| 50 – 150 SF | 150 – 450 CF | 4 to 5 feet | 2 feet | Small (less than 30 feet tall) |
| 150 – 300 SF | 450 CF – 900 CF | 5 to 8 feet | 4 feet | Medium (less than 50 feet tall) |
| More than 300 square feet | More than 900 CF | More than 8 feet | More than 6 feet | Large (taller than 50 feet) |
| Note: Three feet of planting soil shall be installed. Soil must be free of gravel, stones, and rubble. | | | | |

2. Soil Mix: Planting soils shall meet the following guidelines:
 - a. All material shall be suitable for plant growth.
 - b. Organic matter shall be a minimum of 2.5% and a maximum of 10%, per FM 1-T-267.
 - c. The soil shall have a pH value between 5.5-7.0, per FM 5-550.
 - d. Organic matter shall be created using any of the following materials: mulch, manure, or dead leaves.
 - e. Soil shall not be compacted greater than 80% maximum Standard Proctor dry density, except in sandy soils. Sandy soils may be compacted up to 85%, except well-graded sandy soils.
3. Soil Amendments: Soil conservation is encouraged. Areas “leftover” in roadway design shall be dedicated to expanding areas for planting soil. If insufficient prepared soil would exist in the area within the tree lawn and building setback, then structural soil or other acceptable means to enhance available soil volume shall be installed under the sidewalk to reach the appropriate equivalent volume.
4. Minimum Roadside Assembly: For rights-of-way that are 50 feet or greater in width, to ensure adequate soil and space for growth, the minimum cross-sectional width for the sidewalk and tree lawn together shall be as reflected in Part 4, Road Cross-Section Design.
5. Soil Trenches: When tree openings are used, a continuous trench of planting soil shall extend between the pits. Open paver bricks or other pervious means shall extend between pits, with the PCZ still provided by a concrete sidewalk.

Section E - Street Trees within DTB, DTC, or DTE Zones.

1. Shaded Sidewalks: Trees providing continuous shade at maturity over the sidewalk at planting are required on all streets with DTB, DTC, or DTE zoning. Building mass shall not be considered a contributing factor to shade.

2. Prioritization: Streets shall be designed to accommodate the appropriate primary tree. Large trees are more appropriate than small trees both in narrow and wide right-of-ways in order to achieve vertical clearances, proper human scale, and ground-level visibility.
3. Required Species: On each block, tree selection shall be according to the Downtown Street Tree Plan (Table 5-3). Trees on both sides of the street should match. Any tree species not specifically enumerated in Table 5-2 does not meet the shade requirement for new trees unless specifically listed in Table 5-3. Such exceptions are valid only in the locations listed in Table 5-3. Streetscape plans approved by the City Commission may supersede Table 5-3.
4. Deviations: If the primary tree cannot fit due to existing physical constraints, then the secondary tree shall be planted. If neither the primary or secondary trees will fit, then another primary or secondary tree shall be planted. Tertiary trees are listed in Table 5-3 only in the event overhead utilities prevent installation of larger trees. Deviations to Table 5-3 may be considered given commercial availability; for soil conditions that cannot be reasonably amended; or to achieve specific urban design objectives, such as signifying public buildings, historic buildings, neighborhood gateways, and transitions in context zone.

Section F - Street Trees Outside DTB, DTC, or DTE Zones.

1. Shaded Sidewalks: On High-Pedestrian Zones designated by the City Engineer trees shall be planted so as to provide continuous shade at maturity over the sidewalk.
2. Thoroughfare Streets: On Interstate Connector, Arterial, and Collector roads, primary trees shall be planted between the curb and the sidewalk along straight roadways for speed moderation and shade. Selected tree species must reach at least the height of half the roadway at maturity. Primary and Secondary trees on the roadside shall be accommodated prior to trees in the median.
3. Prioritization: Streets shall be designed to accommodate the appropriate primary tree. Large trees are more appropriate than small trees both in narrow and wide right-of-ways in order to achieve vertical clearances, proper human scale, and ground-level visibility.
4. Tree Lawn: On thoroughfare streets, the minimum standard tree lawn is 8-feet.
5. Required Species: Plantings shall be according to the Thoroughfare Shade Tree Plan (Table 5-4). Any tree species not specifically enumerated in Table 5-2 does not meet the shade requirement for new trees unless specifically listed in Table 5-4. Such exceptions are valid only in the locations listed in Table 5-4. Streetscape plans approved by the City Commission may supersede Table 5-3.
6. Deviations: If the primary tree cannot fit due to existing physical constraints, then the secondary tree shall be planted. If neither the primary or secondary trees will fit, then another primary or secondary tree shall be planted. Tertiary trees are listed in Table 5-4 only in the event overhead or underground utilities prevent installation of larger trees. Deviations to Table 5-4 may be considered given commercial availability; for soil conditions that cannot be reasonably amended; or to achieve specific urban design objectives, such as signifying public buildings, historic buildings, neighborhood gateways, and transitions in context zone.

Section G - Tree Spacing.

1. Distancing Between Trees: Trees planted to provide continuous shade must be planted closer than their expected full crown diameter at maturity at the spacing below. This shall ensure trees

grow taller before the branches spread out and that shade across the whole width of the sidewalk at high noon will be obtained. Overlap would also encourage collective wind-resistance

- a. Small trees: 15 feet on centers or less
 - b. Medium trees: 25 feet on centers or less
 - c. Large trees: 30 feet on centers or less
2. **Intersections:** Trees shall not be planted beyond the point of curvature. Trees planted near intersections must be large species with high branching canopies to ensure maximum visibility and to visually enclose the intersection.
 3. **Existing trees:** Existing trees in good health or proposed trees extending from within a property over the sidewalk may substitute for providing continuous shade and speed moderation for planting new trees in the right-of-way. Existing mature trees in good health planted in the right-of-way that provide effective shade may substitute for installing new trees as well.
 4. **Alignment:** Trees should be aligned so that the edge of the tree lawn or tree opening forms a straight line along the block. A roadside assembly 20-foot wide or greater should be evaluated so as to accommodate a double row of trees.
 5. **Minor Spacing Deviations:** Where site constraints prevent a regular spacing and require adjustments within 10 feet, it is better to place a tree slightly off the desired rhythm than to leave a gap in the planting pattern. A deviation of up to 5 feet is allowable for harmonizing the trees with elements of the building façade, e.g. the projection of columns so as not to block windows.
 6. **Parallel Parking:** Street trees planted along delineated parallel parking spaces should be planted behind the front of the separation line between the spaces.

Section H - Tree Clearances.

1. **Horizontal Clearances:** Minimum guidelines for the clearance between the trunk of a street tree and the corresponding elements are the distances below.
 - a. Parking Sign: 3 feet
 - b. Utility Box: 3 feet
 - c. Parking Meter: 3 feet
 - d. Pedestrian furniture: 3 feet
 - e. Water or Sewer Main or Service Pipe
 - i. Primary and secondary trees: 15 feet
 - ii. Tertiary tree or palm: 7.5 feet
 - f. Traffic Sign: 5 feet
 - g. Utility Poles: 5 feet
 - h. Crosswalk: 5 feet
 - i. Driveways: 5 feet
 - j. Edge of Pavement: 1.5 feet
 - k. Face of Curb: 1.5 feet
2. **Root Barriers:** If a root barrier is installed, the horizontal clearance between a primary or secondary tree and a water or sewer or service pipe may be reduced to 10 feet. For tertiary or palm trees, the horizontal clearance may be reduced to 5 feet.

3. Vertical Clearances: Trees shall be selected and maintained so that the appropriate overhead clearances can be maintained over roadway elements. Primary and secondary trees are superior to tertiary for achieving height clearances.
 - a. Travel Lane: 14 feet
 - b. Loading Zone: 14 feet
 - c. Parking Lane: 8 feet
 - d. Bicycle Lane: 8 feet
 - e. Sidewalk: 8 feet
4. Overhead Clearances: Should it not be possible to plant the trunks of any primary or secondary trees underneath or up to five feet from overhead utilities, then tertiary trees may be used.
5. Accessible Parking and Passenger Loading Zones: Tree lawns and tree openings shall not conflict with the ramps or landing zones of accessible parking spaces and passenger loading zones.
6. Street Lighting: Street lighting should be coordinated with tree selection, placement, and pruning, so that tree canopies do not sit directly below street lamps. For streetscape projects, lighting should be installed halfway inbetween trees. Lighting installed within the same row as street trees should align with the trunks.

Section I - Tree Openings.

1. Location: Tree openings may only be installed instead of tree lawns on Primary Streets. Tree grates and suspended sidewalks may only be used in instances where there is a critical constriction for meeting ADA standard widths and a tree could not otherwise be planted.
2. Pedestrian Clear Zone: Only the outside 1-foot of a tree opening may count towards meeting the minimum Pedestrian Clear Zone (PCZ) should a level surface, such paver brick, a tree grate, or suspended sidewalk, be provided.
3. Tree Grates: Tree grates installed within sidewalks must be certified as meeting the requirements of the Americans with Disabilities Act. The grate pattern may only have gaps ½-inch or less. Tree grates must have knock-out rings to allow for trunk flare growth over time.
4. Paving Stones and Bricks: Where sand set paving stones, cobbles, or bricks are used, they should be placed outside the root ball.

Section J - Street Trees within On-Street Parking.

1. Cross-Sectional Placement: In the event that primary trees cannot be accommodated on the roadside, they shall be installed within parallel parking rows where present, with one tree between each space. The trees shall either be installed in bulb outs or level with the roadway and with permeable bricks.

Section K - Planting and Installation Standards.

1. Grades and Standards: All proposed plant material shall be Florida #1 or better quality as outlined in “Grades and Standards for Nursery Plants,” latest edition as published by the State of Florida Department of Agriculture and Consumer Services, Division of Plant Industry. All plant material shall meet minimum specified size requirements and shall be in a healthy and thriving condition, free of pests and diseases when delivered for planting. Material shall be inspected at

the nursery or upon delivery to ensure they meet specifications. If not planted immediately, plant material shall be kept moist and protected from temperature extremes until they are planted.

2. Caliper & Height: All new street trees shall be the highest caliper commercially available for the tree selection in Tables 5-3 & 5-4 up to 4-inches in caliper when planted. Palms, if used, shall have a clear trunk height of 8-feet or more.

Section L - Irrigation.

Irrigation system design should be customized to match the design of the landscape and be operated in an efficient manner that minimizes run-off and percolation beyond the intended root zone. Irrigation systems should not be utilized to replace rainfall but rather to supplement rainfall. Irrigation frequency and timing must comply with all water restrictions. Water schedules should be adjusted seasonally. Automatic moisture-sensing shut-off devices are required.

Reclaimed water or other non-potable water sources shall be used for irrigation when available.

Section M - Drainage.

1. Site Conditions: In locations where excess water is of concern, paved areas should be sloped away from planting soils. Planting beds should also be mounded. Curbs on the edge of planting installations may be used to reduce the inflow of water.
2. Slopes: Landscaping installations should have the proper slope in order to ensure sufficient drainage for the survival of plantings. The following minimum slopes shall be provided for landscaping installations.
 - a. Swale flow line: 1%
 - b. Lawn: 1.5%
 - c. Planted beds: 5%

For lawns, soils with less than 5% clay can be flatter if there is sufficient subsurface drainage.

3. Drainage Installations: For poorly drained conditions and soils, a means of positive drainage shall be established for the tree lawn or tree opening. This may include the following installations:
 - a. A 12-inch diameter augured hole, drilled to the water table or a depth of 4 feet, filled with $\frac{1}{2}$ to $\frac{3}{4}$ inch gravel or sandy loam to ensure percolation.
 - b. A 4-inch perforated pipe connecting to an existing drainage line.
 - c. In compacted soils, a gravel-filled dry well connected to a drainage system
 - d. Perforated drainage lines.
4. Drainage Pipe: Perforated pipes with holes only on the bottom are preferred to pipes with openings on all sides. Joints must be solid. Pipes must be bedded in filtering material such as coarse sand to support the pipe bottom. If the drain line passes under a sidewalk, the pipe should be changed to a solid line with no perforations. Sleeve locations must be indicated on the design drawings.

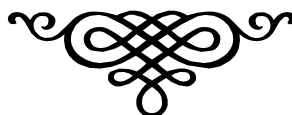

Table 5-2: Street Tree Selection

| | Common Name | Scientific Name | Tree Lawn | Tree Opening | N-S Streets Only | Native | T3 Only |
|----------------|-----------------------|---|----------------|--------------|------------------|--------|---------|
| Small/Tertiary | Crape Myrtle | <i>Lagerstroemia</i> | 4 ft. to 5 ft. | X | X | | X |
| | Geiger Tree | <i>Cordia sebestena</i> | 4 ft. to 5 ft. | X | | X | |
| | Golden Trumpet Tree | <i>Tabebuia chrostricha</i> | 4 ft. to 5 ft. | | X | | |
| | Green Buttonwood | <i>Conocarpus erectus</i> | 4 ft. to 5 ft. | X | X | X | |
| | "Little Gem" Magnolia | <i>Magnolia grandiflora</i> | 4 ft. to 5 ft. | | | X | |
| | Pigeon Plum | <i>Coccoloba diversifolia</i> | 4 ft. to 5 ft. | | | X | |
| | Pink Tabebuia | <i>Tabebuia heterophylla</i> | 4 ft. to 5 ft. | | X | | |
| | Pitch Apple | <i>Clusia Rosea</i> | 4 ft. to 5 ft. | X | | X | |
| | Silver Buttonwood | <i>Conocarpus erectus var. sericeus</i> | 4 ft. to 5 ft. | X | X | X | |
| | Sweetbay Magnolia | <i>Magnolia virginiana</i> | 4 ft. to 5 ft. | | | X | |

| | Common Name | Scientific Name | Tree Lawn | Tree Opening | N-S Streets Only | Native | T3 Only |
|------------------|-------------------------|---------------------------------------|----------------|--------------|------------------|--------|---------|
| Medium/Secondary | Black Olive | <i>Terminalia buceras</i> | 5 ft. to 8 ft. | | | X | |
| | Bracken's B.B. Magnolia | <i>Magnolia grandiflora</i> | 5 ft. to 8 ft. | | X | X | |
| | Cherry Laurel | <i>Prunus caroliniana</i> | 5 ft. to 8 ft. | X | | X | |
| | Drake Chinese Elm | <i>Ulmus parvifolia</i> | 5 ft. to 8 ft. | X | | | |
| | Florida Elm | <i>Ulmus americana var. floridana</i> | 5 ft. to 8 ft. | X | | X | |
| | Gumbo Limbo | <i>Bursera simaruba</i> | 5 ft. to 8 ft. | | | X | |
| | Redbay | <i>Persea borbonia</i> | 5 ft. to 8 ft. | | | X | |
| | Satin Leaf | <i>Chrysophyllum oliviforme</i> | 5 ft. to 8 ft. | X | | X | |
| | Southern Red Cedar | <i>Juniperus silicicola</i> | 5 ft. to 8 ft. | | | X | X |
| | Winged Elm | <i>Ulmus alata</i> | 5 ft. to 8 ft. | X | | X | |

| | Common Name | Scientific Name | Tree Lawn | Tree Opening | N-S Streets Only | Native | T3 Only |
|---------------|---------------------|--------------------------------|-----------|--------------|------------------|--------|---------|
| Large/Primary | Laurel Oak | <i>Quercus laurifolia</i> | 8 ft. + | | | X | |
| | Live Oak | <i>Quercus virginiana</i> | 8 ft. + | | | X | |
| | Mahogany | <i>Swietenia mahogani</i> | 8 ft. + | | | X | |
| | Red Maple | <i>Acer rubrum</i> | 8 ft. + | | | X | X |
| | Sand Live Oak | <i>Quercus germinata</i> | 8 ft. + | | | X | |
| | Shumard Oak | <i>Quercus shumardii</i> | 8 ft. + | | X | X | X |
| | Southern Magnolia | <i>Magnolia grandiflora</i> | 8 ft. + | | | X | |
| | Southern Slash Pine | <i>Pinus elliottii</i> | 8 ft. + | | | X | |
| | Sugarberry | <i>Celtis laevigata</i> | 8 ft. + | | | X | X |
| | Sweetgum | <i>Liquidambar styraciflua</i> | 8 ft. + | | | X | X |
| | Sycamore | <i>Plantanus occidentalis</i> | 8 ft. + | X | X | X | X |

Legend

| | |
|------------------|--|
| Small | 150 CF+ of Soil, Space 20 feet apart or less |
| Medium | 450 CF+ of Soil, Space 25 feet apart or less |
| Large | 900 CF+ of Soil, Space 30 feet apart or less |
| Tree Lawn | Width of a continuous strip of soil between the sidewalk and the curb |
| Tree Opening | Per IFAS, the tree is listed as being able to be used in a sidewalk cutout |
| N-S Streets Only | Only plant on north-south aligned streets to ensure enough sun |
| Native | The tree is native |
| T3 Only | Only plant in an area with front lawns for correct growth context |
